## Завдання:

### 4. CRUD Javascript App: Create/Edit Pages

**Description:** In this work, you need to continue working and add two new parts to your website - **Create & Edit Pages** (You can find the template of these pages by following the [link](#))

**Update/Delete operations are not required for this work!**

Also you must validate the forms using HTML **attributes** (inputs must be configured for your data format).

If incorrect data is entered in the inputs, you must use JavaScript to inform the user with **modal windows** or just plain alert() function.

**Bonus** points are provided for this work, if you implement a styled modal window that will work with JavaScript.

#### Requirements:

- **Responsiveness** absolutely not required.
- **Styling** is not important at all. Is up to you.

#### Веб Сторінка:

The screenshot shows a web browser window with the address bar displaying `/Users/zinoviy.lutsan/GitHub/Web_Programming_Labs/Lab_4/index.html`. The page content is titled "Shoes list" and features a search bar with the placeholder text "Search...". Below the search bar are three buttons: "Додати нове взуття", "Редагувати вибране", and "Видалити вибране". The main content is a table with the following columns: "Choise", "Producer", "Price", "Size", and "Color". The table contains 15 rows of shoe data. At the bottom of the page, there is a text label "Total price: 32270 grn".

| Choise                | Producer     | Price | Size | Color |
